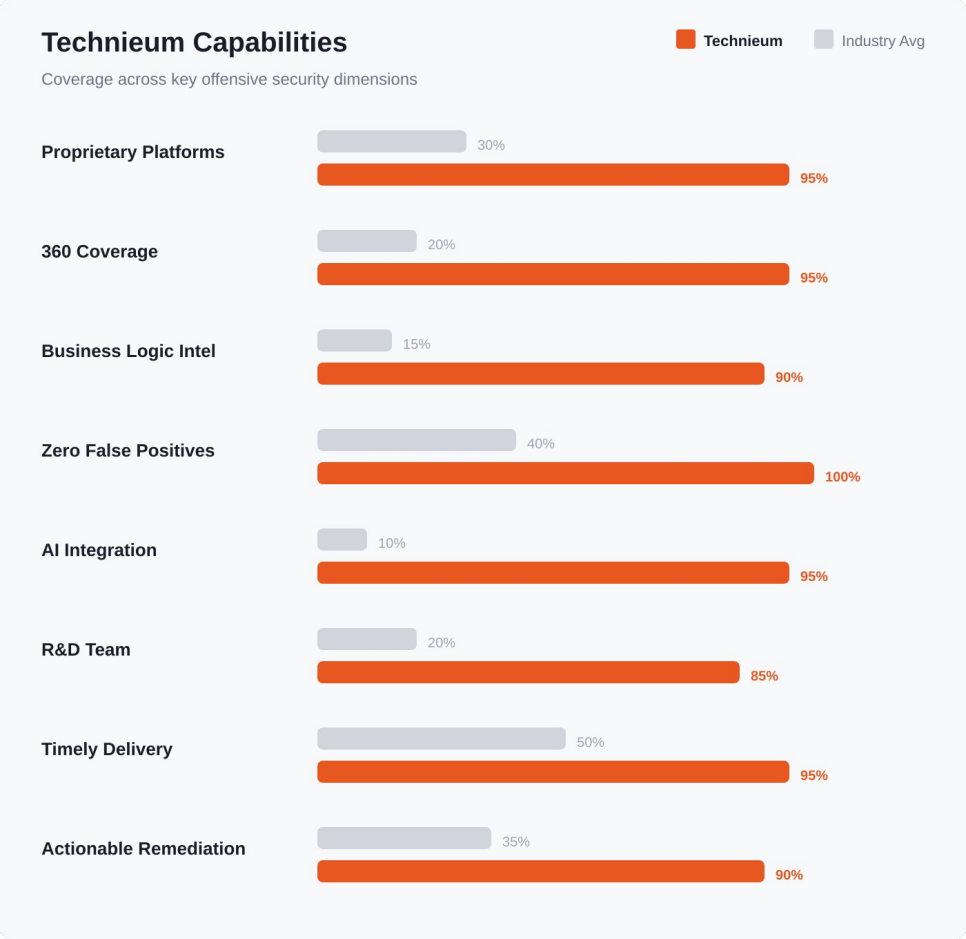
WHY TECHNIEUM

The Competitive Edge

Technieum combines 6 proprietary AI platforms, human-validated testing, and a dedicated R&D team to deliver measurable security outcomes.



360° Coverage in Every Engagement

Every project includes SAST + SCA + ASM + AD + AI/LLM testing — all cross-correlated. One engagement delivers complete, unified visibility across your entire attack surface.

15,000+ Real-World Exploits via ToIP

Every assessment is powered by our RAG-based intelligence engine, generating instant attack playbooks with exact payloads, WAF bypass techniques, and chained exploit sequences specific to your technology stack.

Zero False Positives — Guaranteed

AI accelerates discovery across every tool in our arsenal. Human experts validate every single finding before it enters your report. You invest remediation effort in real, exploitable risk only.

AI-Powered, Context-Aware Remediation

Fix guidance tailored to your specific frameworks, libraries, and architecture — actionable code-level and configuration recommendations, not generic suggestions.

PROPRIETARY PLATFORM ECOSYSTEM

6 Platforms. Built In-House.

Proprietary platforms that power every engagement — capabilities no other vendor can offer.

Intelligence Backbone

ToIP transforms hours of manual vulnerability research into a single semantic query — generating instant attack playbooks with exact payloads, WAF bypass techniques, and chained exploit sequences from 15,000+ real-world disclosed vulnerabilities.

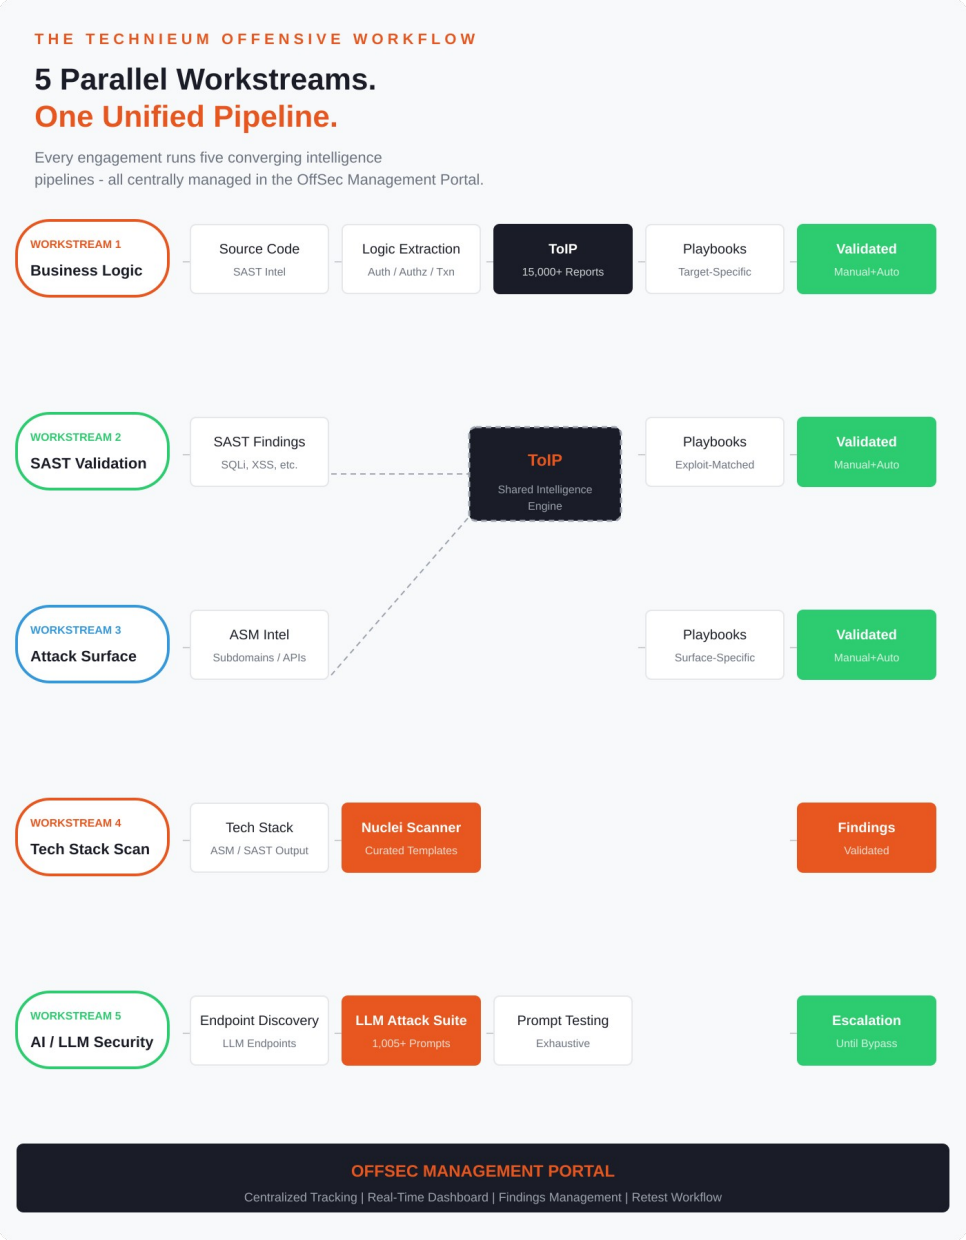
Unified Command Centre

The OffSec Management Portal unifies all six platforms into a single interface — multi-tester collaboration, CVSS scoring, CWE mapping, one-click reporting, real-time dashboards, and retest tracking with 30-40% admin overhead reduction.

THE TECHNIEUM OFFENSIVE WORKFLOW

5 Parallel Workstreams. One Unified Pipeline.

Every engagement runs five converging intelligence pipelines — all centrally managed in the OffSec Management Portal.



Workstream 1 — Business Logic

Extracts business logic from source code through AI SAST, feeds it into ToIP to generate target-specific attack playbooks with exact payloads, then validates every finding through manual exploitation.

Workstream 2 — SAST Validation

Takes SAST findings (SQLi, XSS, injection chains) and matches them against ToIP's 15,000+ exploit database for exploit-matched playbooks with validated proof-of-concept evidence.

Workstream 3 — Attack Surface Intel

Processes ASM intelligence — subdomains, APIs, exposed services, cloud assets — into surface-specific attack strategies with validated exploitation paths.

Workstream 4 — Tech Stack Scanning

Detects the full technology stack via ASM and SAST output, then runs curated Nuclei templates with handpicked checks for known vulnerabilities specific to your environment.

Workstream 5 — AI/LLM Security

Discovers LLM endpoints and deploys the 1,005+ prompt attack suite across all 10 OWASP LLM categories with exhaustive escalation until bypass or confirmed resilience.

SERVICES PORTFOLIO

9 Categories. 50+ Service Lines.

Every service AI-enhanced. Every finding human-validated. Every engagement backed by 6 proprietary platforms.

Infrastructure & Network

ASM, internal/external network testing, AD security audit, wireless, config review, segmentation, attack path mapping, vulnerability assessment.

Application Security

Web, API (REST/GraphQL/SOAP), mobile, thick client testing, source code review (AI SAST), software composition analysis (AI SCA), architecture review.

Cloud Security

AWS/Azure/GCP reviews, M365 assessment, CIS benchmarks, cloud infrastructure testing, IAM privilege escalation, Kubernetes security.

AI & Emerging Technology

AI & LLM penetration testing, MCP testing, AI systems audit, adversarial red teaming, AI threat modelling, security tooling guidance.

Threat Simulations

Phishing (MFA bypass), spear-phishing, BEC simulation, vishing, credential harvesting, MFA fatigue attacks, physical social engineering.

ICS/OT Security

SCADA assessment, OT network architecture review, IT/OT segmentation testing, protocol security (Modbus/DNP3/OPC UA), PLC/RTU/DCS testing.

Work From Home Security

VDI security assessment, remote endpoint audit, DLP testing, VPN/network security, identity testing, collaboration tool security, home network assessment.

Security Consulting

AppSec program development, product security audits, tooling evaluation, architecture advisory, SDLC integration, maturity assessment.

THE TECHNIEUM PROJECT CYCLE

From Onboarding to Delivery

Structured. Milestone-driven. Daily updates. Instant critical escalation. No delays. No surprises.

1 Scoping

Define objectives, rules of engagement, target scope. Formal test plan with milestones. Dedicated PM + lead pentester.

2 AI Recon

Agentic AI deploys 100+ tools: subdomain discovery, DNS resolution, web probing, and initial vulnerability scanning.

3 Intel Integration

ToIP generates target-specific attack playbooks. AI SAST extracts business logic. ASM feeds surface intel.

4 Testing

Multi-tester parallel execution via OffSec Portal. Daily status emails. Critical findings escalated immediately.

5 Deep Analysis

Business logic exploitation, privilege escalation chains, complex vulnerability chaining. Every finding manually validated.

6 Reporting

Executive summary + technical report (CVSS/CWE) + attack playbook docs + PoC demos + business logic test cases.

7 AI Remediation

Context-aware fix guidance tailored to your tech stack and architecture. Actionable code-level recommendations.

8 Retest

Verify every remediation. Confirm closure. Update live dashboard. Final sign-off with documented evidence.

Milestone-Driven Delivery

Every engagement follows structured milestones with daily status updates, weekly reviews, and instant critical escalation. A dedicated PM and lead pentester are assigned from day one — ensuring accountability, transparency, and on-time delivery throughout the project lifecycle.

AI-Amplified at Every Stage

From agentic reconnaissance (100+ orchestrated tools) through ToIP intelligence integration (15,000+ exploit database) to AI-powered remediation guidance — artificial intelligence amplifies every phase while human experts validate every finding.

Continuous Client Visibility

The OffSec Management Portal provides real-time dashboards showing engagement progress, findings as they emerge, and retest status. Critical vulnerabilities are escalated immediately — you never wait for the final report to learn about urgent risks.

COMPLIMENTARY ASSESSMENT

Start With a Free Assessment

Experience the Technieum difference — at no cost, no commitment. We'll show you what others miss.

Complimentary Penetration Test

A focused, no-cost penetration test targeting your most critical external-facing asset — web application, API, or network perimeter. Full manual testing with validated findings, proof-of-concept evidence, and CVSS-scored results. Experience Technieum's zero false positive guarantee firsthand.

Basic External Attack Surface Scan

Our AI-Based ASM platform maps your external-facing digital assets — subdomains, exposed APIs, cloud resources, shadow IT, and forgotten infrastructure — using 100+ orchestrated reconnaissance tools. You receive a complete inventory of what attackers can see before they strike.

Threat Model Report

A tailored threat model mapping your organization's attack surface to relevant threat actors, attack vectors, and risk scenarios aligned to MITRE ATT&CK. Identifies the most critical exposures and provides a prioritized remediation roadmap for leadership and technical teams.

DELIVERABLES

What You Receive

Every engagement produces comprehensive, actionable documentation — not generic reports.

✓ **Technical Report**
Detailed findings with CVSS scoring, CWE mapping, proof-of-concept evidence, and step-by-step reproduction instructions.

✓ **Management Report**
Executive-level risk summary with business impact analysis, prioritized recommendations, and strategic remediation roadmap.

✓ **Threat Model Report**
Comprehensive threat landscape analysis specific to your environment, attack vectors, and adversary profiles mapped to MITRE ATT&CK.

✓ **ToIP Playbook Document**
Target-specific attack playbooks generated from 15,000+ real-world disclosed vulnerabilities via our RAG-powered intelligence engine.

Ready to Secure Your Organization?

Partner with Technieum for AI-powered offensive security with zero false positives.
