THREAT SIMULATIONS

Threat Simulations & Social Engineering

APT-grade phishing, MFA bypass testing, and vishing — measuring your human firewall with real adversary TTPs.

Inside This Document

Key Benefits • Your Challenge • Services Overview • The Technieum Edge • Deliverables

KEY BENEFITS

Why This Matters

APT-Grade Campaigns
Real threat actor TTPs — OSINT-driven recon, custom pretexts, multi-stage attack chains.

MFA Bypass Expertise
Push fatigue, AiTM token theft, and real-world MFA circumvention techniques.

Actionable Metrics
Click rates, credential submissions, MFA bypass success — data for targeted improvement.

YOUR CHALLENGE

Your employees are the first and last line of defense against social engineering:

- How susceptible are employees to targeted phishing?
- Can attackers bypass MFA through push fatigue or token theft?
- Which departments are highest risk?
- How quickly do employees report suspicious communications?

Why Technieum as Your Trusted Partner
Technieum brings 6 proprietary AI platforms, an in-house R&D team actively hunting zero-days, and AI-powered methodologies that deliver validated, exploitable findings with guaranteed zero false positives — enabling your team to focus remediation effort where it matters most.

OUR SOLUTION

Services Overview

Technieum designs custom campaigns tailored to your industry, org structure, and threat landscape — simulating real APT tactics.

1	**Phishing Impact Testing**	Custom phishing campaigns targeting specific employee groups with APT-grade pretexts — executive spear-phishing, department-wide awareness campaigns, new hire testing, and targeted credential harvesting. Includes MFA bypass techniques (push fatigue, AiTM proxy), custom landing pages replicating internal SSO portals, and real-time tracking of open, click, submission, and report rates.
2	**Business Email Compromise**	CEO fraud, vendor impersonation, invoice redirection testing financial controls.
3	**Vishing Campaigns**	Voice phishing targeting IT helpdesk, finance, HR via pretexting and impersonation.
4	**MFA Fatigue Attacks**	Push notification abuse, AiTM session token theft, auth flow manipulation.
5	**Credential Harvesting**	Realistic clone portals measuring submission rates and control effectiveness.
6	**Physical Social Engineering**	Tailgating, badge cloning, pretexting, USB drops, physical security testing.

THE TECHNIEUM EDGE

Why Technieum for Threat Simulations

Our Methodology
OSINT recon → custom pretext development → multi-vector campaign execution → real-time metrics → department analysis → training recommendations.

APT-Grade Design
OSINT-driven, custom pretexts — not generic commodity templates.

MFA Bypass Testing
Push fatigue, AiTM token theft — real MFA circumvention.

ToIP Social Intel
RAG-powered research on industry-specific social engineering TTPs.

Comprehensive Metrics
Click, submission, bypass rates — department breakdowns, repeat offenders.

Standards Alignment

Every Technieum engagement aligns with globally recognized security frameworks including OWASP Top 10, OWASP API Top 10, OWASP LLM Top 10, PTES, NIST CSF, NIST AI RMF, MITRE ATT&CK, CIS Benchmarks, IEC 62443, and ISO 27001:2022. Our team holds OSCP, OSEP, CRTE, CRTP, eWPTX, eCPPT, and CEH certifications. Technieum is ISO 9001:2015 and ISO 27001:2022 certified.

OUR METHODOLOGY

How We Deliver Results

Technieum's threat simulation methodology follows a structured five-phase approach designed for social engineering campaigns — combining OSINT reconnaissance with APT-grade attack simulation and comprehensive metrics collection.

Discover	Analyze	Attack	Report	Remediate
Asset enumeration	ToIP intelligence	Manual exploitation	CVSS/CWE scoring	AI-powered fixes
Tech fingerprinting	Logic extraction	Business logic test	PoC evidence	Stack-specific code
OSINT gathering	Threat modelling	Chain validation	Exec summary	Config guidance
Scope validation	Risk prioritization	Privilege escalation	Test case docs	Retest validation
Port scanning	Attack planning	Lateral movement	Playbook docs	Closure sign-off
Service detection	Playbook generation	Data exfiltration	Risk heatmap	Knowledge transfer

Phase 1 — Discover

OSINT reconnaissance gathers organizational intelligence — email formats, org charts, technology stack, employee social profiles, recent news, and industry-specific threat actor TTPs. Target selection and grouping by department, role, and seniority.

Phase 2 — Analyze

Campaign design develops custom pretexts tailored to your industry and organization. Clone portal creation for credential harvesting. Vishing scripts development. MFA bypass technique selection (push fatigue, AiTM). ToIP social intelligence informs pretext credibility.

Phase 3 — Attack

Multi-vector campaign execution — phishing emails with custom templates, vishing calls to targeted personnel, MFA fatigue push attacks, credential harvesting via clone portals, and physical social engineering where scoped. Real-time tracking of all interactions.

Phase 4 — Report

Campaign results with click rates, credential submission rates, MFA bypass success rates, time-to-report metrics, and department-level breakdowns. Trend analysis against industry benchmarks. Repeat offender identification.

Phase 5 — Remediate

Targeted security awareness recommendations by department and role. Email security control tuning guidance. MFA implementation improvements. Phishing reporting process optimization. Custom training content development based on campaign results.

DELIVERABLES

What You Receive

Every engagement produces four comprehensive deliverables designed for different stakeholders — from technical teams requiring reproduction steps to executives needing business impact context.

Technical Report	Management Report	Threat Model Report	ToIP Playbook
CVSS-scored, CWE-mapped findings with proof-of-concept evidence and step-by-step reproduction instructions for every vulnerability discovered.	Executive-level risk summary with business impact analysis, prioritized recommendations, and strategic remediation roadmap for leadership.	Comprehensive threat landscape analysis with attack vectors mapped to MITRE ATT&CK framework specific to your environment.	Target-specific attack playbooks generated from 15,000+ real-world disclosed vulnerabilities via our RAG-powered intelligence engine.

- ✓ **Technical Report**
  Detailed findings with CVSS scoring, CWE mapping, proof-of-concept evidence, and step-by-step reproduction instructions.
- ✓ **Management Report**
  Executive-level risk summary with business impact analysis, prioritized recommendations, and strategic remediation roadmap.
- ✓ **Threat Model Report**
  Comprehensive threat landscape analysis specific to your environment, attack vectors, and adversary profiles mapped to MITRE ATT&CK.
- ✓ **ToIP Playbook Document**
  Target-specific attack playbooks generated from 15,000+ real-world disclosed vulnerabilities via our RAG-powered intelligence engine.

All deliverables are produced within the agreed timeline with milestone-driven tracking. Critical findings are escalated immediately via the OffSec Management Portal — you never wait for the final report to learn about urgent risks.

Ready to Secure Your Organization?

Partner with Technieum for AI-powered offensive security with zero false positives.
